Watson IoT Platform - T3 - NodeRed - Device - connection

Käyttöönottotehtävä 3

### 1. Johdanto

Tässä käyttöönottotehtävässä luomme yhteyden todellisen laitteen ja IBM Watson NodeRED – palvelimen välille.

Teemme myös web-selaimella toimivan käyttöliittymän.

Käyttöönottotehtävässä 1 loit itsellesi käyttäjätunnuksen IBM Bluemix ympäristöön, perustit laitteen ja kirjoitit laitedataa joko MQTT-sovelluksella tai mikro-ohjainlaitteella

Jos et jo tehnyt näitä asioita, katso ohjeet IBM Cloud –dokumentaatiosta

https://console.bluemix.net/docs/services/IoT/index.html#gettingstartedtemplate

Käyttöönottotehtävässä 2 käsittelimme laitedataa Watson IoT-alustalla.

Kuva 1.1 Käyttöönottotehtävän 2 NodeRED –flow ja kuhunkin node-lohkoon kirjatut sisällöt.

Kuvassa näkyvä laitedataa simulointina luova flow-kaavio ja laitedataa laitteelta lukeva flow-kaavio on nopea kirjoittaa, jos et niitä ole aiemmin tehnyt.

Juuri sama laitetyyppi ja laitteet on luotava Watson IoT –alustaan juuri samalle organisaatiolle.

Kuva 1.2 Käyttöönottotehtävän 2 laitteet Devices – laitenäkymässä.

laitteelle – oikealle tai simuloidulle – voidaan kirjoitta seuraavan kuvan mukaisesti.

Kuva 1.3 Käyttöönottotehtävän 2 laitteelle kirjoitus.

Edellä kuvatun flown:n voit siirtää omaan Watson NodeRED:iin tuomalla sisällön Import Clipboard –toiminnolla. Kopioi seuraava "koodi" leikepöydälle. Siirrä se windows notepadeditoriin poistaaksesi ylimääräiset näkymättömät merkit. Kopioi se siitä NodeRED:iin. Näin ei tarvitse kirjoittaa koodia.

## Koodi on myös tiedostossa

IBMWatsonSignalsFunctionsServo12\_flow\_va.txt

IBM Cloud -tilisi ominaisuuksista ym. johtuen sinulla ei ehkä ole valittavassa NodeRED IBM IoT - nodessa autentikointimenetelmää "Bluemix Service". Voit tällöin valita autentikointimenetelmäksi "API Key". Käy luomassa Watson IoT Platform:n puolella API Key ja syötä tiedot vastaavasti tähän IBM IoT -nodeen.

2. Yhteys laitteen ja Watson IoT-alustan välillä.

#### Tehtävä 1

Luo kuvassa 1.2 näkyvään laitenäkymään – tai itse asiassa kuvan kaltaiseen laitenäkymään omassa Watson IoT – Application Instanssissa – todellinen laite. Laitteelle luodaan ensin

Device Type – laitetyyppi, esim. A\_MKR1000

Device ID - laite, esim. 1234

ja annetaan järjestelmän luoda kirjautumistiedot. **Tallenna organization ID .....Authentication Token ...** kaikki syntyvät kirjautmistiedot myöhempää käyttöä varten tekstitiedostoon.

Laitteena voidaan käyttää lähes mitä hyvänsä laitetta, joka pystyy lähettämään Internet:iin http-liikenteenä MQTT-protokollan mukaisia sanomia.

Ohjeessa " IoT\_IBMWatson\_MKR1000\_example1\_v30012018.pdf" kerrotaan yksityiskohtaisesti, miten laitteen kirjautumistiedot luodaan ja miten laite liitetään Watson IoT –alustaan.

Ohjeen "IoT\_IBMWatson\_mqtt\_Harj1\_v05092018.pdf" lopussa näytetään, miten Windowstietokoneeseen asennettua MQTT Client –sovellusta MQTTBox käytetään "laitteena".

Tässä laboratorioharjoituksessa käytämme laitteena. Arduino MKR1000 mikro-ohjainta ja jotakin siihen jo aiemmin liitettyä anturia.

Kuva 2.1. Arduino MKR1000 ja Digilent pmodTC1 –anturikortti.

Arduinossa tarvittavan ohjelman lähtökohtana voi käyttää kuvassa näkyvän anturin lämpötilatiedon siirtoon käytettyä ohjelmaa.

```
Timo Karppinen 19.2.2017
Modified for testing SPI thermocouple board Digilent PmodTC1
Please connect
MKR1000 - PmodTC1
GND - 5 GND
Vcc - 6 Vcc
9 SCK - 4 SCK
10 MISO - 3 MISO
2 - 1 SS
Thermocouple data on the SPI
D31 - sign
{\tt D30} ....{\tt D18} - 13 bits of temperature data
D16 - normally FALSE. TRUE if thermocouple input is open or shorted to GND or VCC
D15 ... D0 - reference junction temeprature
The reference junction compensation is calculted in the IC. no need to calculate here.

 Serial.print("signal strength (RSSI):");
 Serial.print(rssi);
 Serial.println(" dBm");
```

Koodi 1. Arduino MKR1000 lukee pmodTC1 –moduulilta lämpötilan ja lähettää tiedon Watson IoT –alustalle.

Voit kopioida koodin tästä. Mutta siirrä kopiosi ensin esim. Windows Notepad:iin ja kopioi se siitä uudelleen. Näin koodista poistuu näkymättömät muotoilumerkit!!

Koodi on tiedostossa

 $Wat\_MKR\_SPI\_ThermoC\_H\_DF48.txt$ 

#### Tehtävä 2

Muuta esimerkin koodia niin, että se siirtää sinun omaan NodeRED-harjoitukseen tilaan "Greenhouse1" lämpötilatiedon "Temp".

Voit NodeRED-esimerkkien mukaisissa flow – nodeissa muuttaa muuttujat "city" muuttujiksi "area". Tähän muuttujaan kirjoitat laitteeltasi arvon "Greenhouse1".

NodeRED-esimerkkien mukaiseen muuttujaan "temp" kirjoitat laitteeltasi todellisen mittausarvon.

HUOM! muita muuttaa myös tähän IBM Watson IoT -alustaan:

**Dashboard** 

Security

**Connection Security:** 

**TLS Optional** 

Tämän jälkeen sammuta laitteestasi sähkö ja anna sen käynnistyä ja ottaa yhteys uudelleen.

IBM Cloud:ssa on ominaisuus, ettei sama laite saa yrittää liittymistä liian usein. Arduino-koodissa laitteemme yrittää uudelleen 30 sekunnin välein. Jo muutaman minuutin "yrittäminen" estää tältä laitteelta pääsyn IBM Cloudiin !!! Voit yrittää jonkin ajan kuluttua uudelleen. Mutta, mikähän on tämä jokin aika?

# Tehtävä 3

Tähän tehtävään voit käyttää eri Arduino MKR1000 korttia. Voi tämän "teknisesti" tehdä samallakin kortilla mutta näin ratkaistuna tämä ei ole niin tositilannetta vastaava.

Edellä esitetyssä Arduino –koodissa on näkyvissä myös sanoman vastaanotto. Siinä on valmiina rivit, joilla vastaanotettu sanoma kirjoitetaan "Serial Monitor" –ikkunaan.

Testaa vastaanoton toimintaa. Kirjoita NodeRED:n puolelta muutama muukin sanoma kuin vain esimerkin käsky käynnistää servo.
